

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-05 19:40:42

Cancer Type: Brain

Report ID: 0E370629

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

The AI model suggests a high-risk finding of a pituitary tumor, with a very high confidence level of 100.0% based on the image patterns, indicating a strong and clear consistency with this diagnosis. However, it is essential to consider the possibility of differential diagnosis, particularly given the low probability of glioma and meningioma, which may warrant further investigation. Given the high risk level of 99/100, it is crucial to expedite the evaluation and management of this case, and I recommend consulting a neuro-oncologist and neurosurgeon as soon as possible to discuss the optimal treatment plan. The Grad-CAM heatmap may provide additional insights into the specific region of interest, but its interpretation requires specialist expertise. It is essential to note that this is an AI-assisted screening result and not a definitive diagnosis, and a comprehensive clinical evaluation by a specialist is necessary to confirm the diagnosis and develop an appropriate treatment plan.
