

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 22:56:56

Cancer Type: Brain

Report ID: 5C583C7C

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

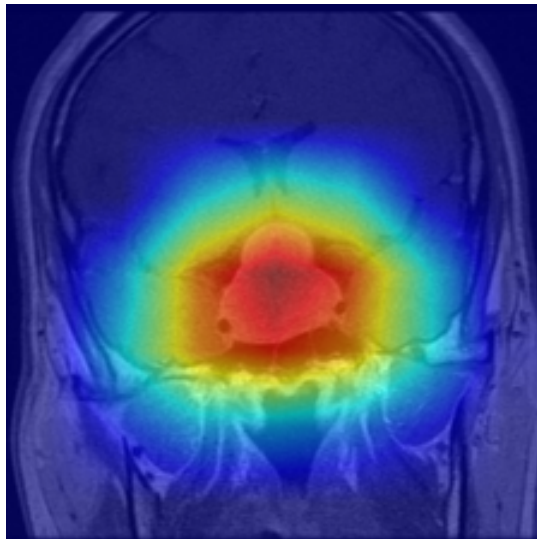

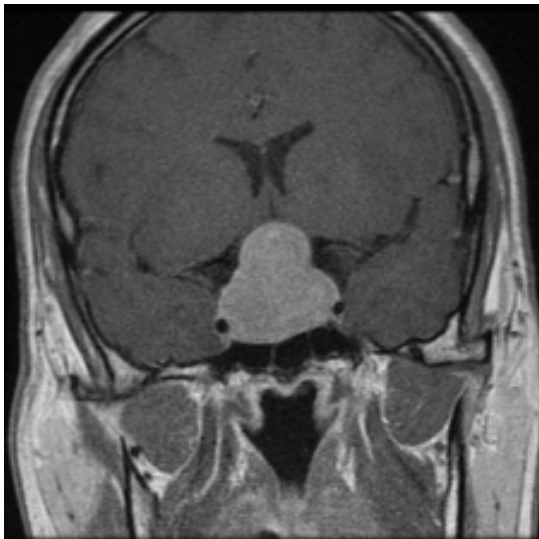

The AI model suggests a high-risk Pituitary tumor with very high confidence, based on the strong and clear image patterns consistent with this finding. The probability distribution indicates a clear dominance of Pituitary class, with negligible probability for Glioma, Meningioma, and non-tumor classes, suggesting a high degree of certainty in the AI analysis. However, it is essential to note that the risk level is High, and the patient should be urgently referred to a neuro-oncologist and neurosurgeon for further evaluation and management. The Grad-CAM heatmap highlights a specific region of interest, which may guide further imaging or histopathological examination. It is crucial to remember that this is an AI-assisted screening result, not a definitive diagnosis, and specialist consultation is necessary for a comprehensive assessment and treatment plan.
