

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 22:36:27

Cancer Type: Brain

Report ID: 412E34FB

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

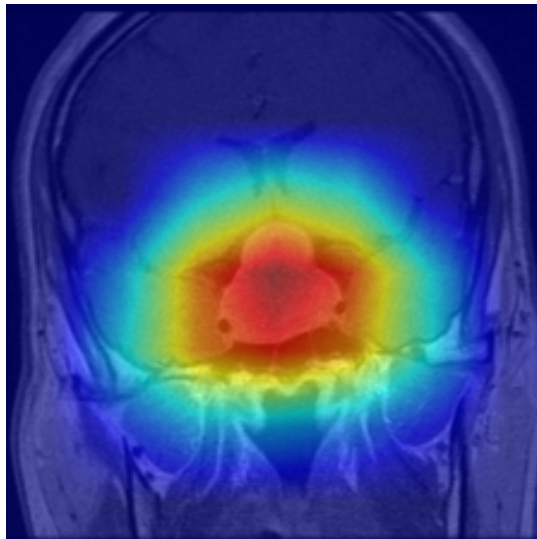

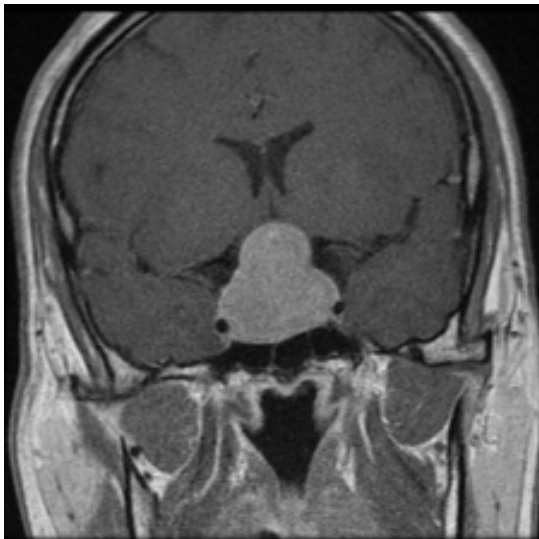

The AI model suggests a high-risk finding of a pituitary tumor, with a very high confidence level of 100% based on the image patterns, indicating a strong and clear consistency with this diagnosis. The probability distribution shows a clear dominance of the pituitary class, with no significant competition from other classes, thereby reducing the likelihood of differential diagnoses such as glioma or meningioma. Given the high risk level of 99/100, it is essential to proceed with a sense of urgency, and I recommend consulting a neuro-oncologist and neurosurgeon as soon as possible to discuss the best course of action for further evaluation and potential treatment. The Grad-CAM heatmap may provide additional insights into the specific region of interest, but its interpretation should be done in conjunction with a specialist. It is essential to note that this is an AI-assisted screening result and not a definitive diagnosis, and further clinical evaluation and diagnostic testing are necessary to confirm the presence and nature of the tumor.
