

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 21:16:43

Cancer Type: Brain

Report ID: F4F99CCC

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

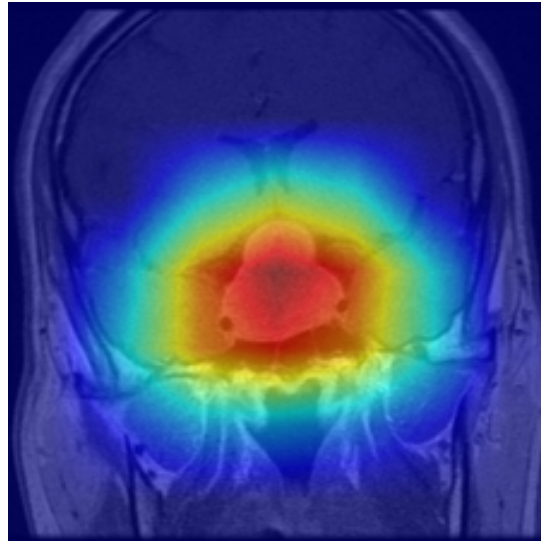

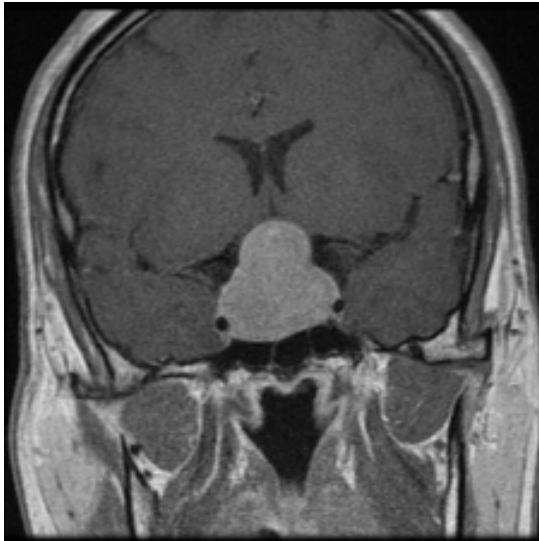

The AI model suggests that the medical image is highly suggestive of a Pituitary tumor, with a very high confidence level of 100.0%, indicating that the image patterns are strongly and clearly consistent with this finding. The risk level is classified as High Risk, with a score of 99/100, which warrants urgent evaluation and management. The Grad-CAM heatmap analysis highlights a specific region of interest, although the exact location is not specified. Given the high risk level and the strong likelihood of a Pituitary tumor, it is essential to consult a neuro-oncologist and neurosurgeon to confirm the diagnosis and discuss treatment options. A differential diagnosis of Glioma and Meningioma is also considered, given the low probability of these classes in the full probability distribution, and further evaluation is necessary to rule out these possibilities. This is an AI-assisted screening result, and a definitive diagnosis should only be made by a qualified healthcare professional after a thorough clinical evaluation and diagnostic workup.
