

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 23:45:25

Cancer Type: Brain

Report ID: 96EB4C28

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Notumor	90.1%	9 / 100	Low Risk

Diagnostic Summary

No malignant pattern detected. Model confidence: 90.1%. Routine monitoring is still recommended.

AI-Generated Clinical Recommendation

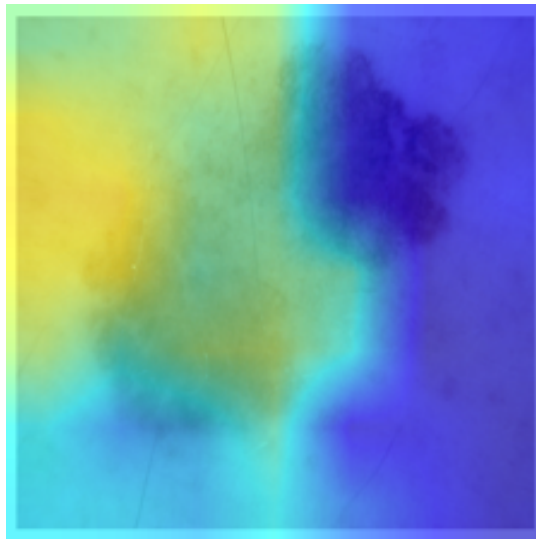

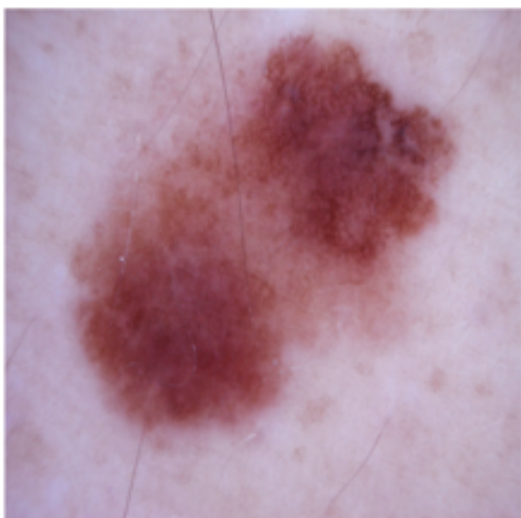

- The AI model suggests image features most consistent with Notumor, which should be interpreted together with the full clinical picture.
- Use routine follow-up timing unless symptoms or imaging concerns increase.
- The uploaded image appears balanced, moderate-contrast, and warm-toned, so interpretation should be correlated with image quality and the original study.
- Grad-CAM shows a focal attention pattern centered in the mid-zone left-sided region, which can help prioritize what to review first. Focus of follow-up: Emphasize that a no-tumor pattern still requires clinical correlation if seizures, progressive headache, focal neurologic findings, or prior abnormal imaging remain concerning.
- Consult neurologist or radiologist if symptoms persist; this is an AI-assisted screening output and not a confirmed diagnosis.
