

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 21:18:28

Cancer Type: Brain

Report ID: 3CF6D892

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

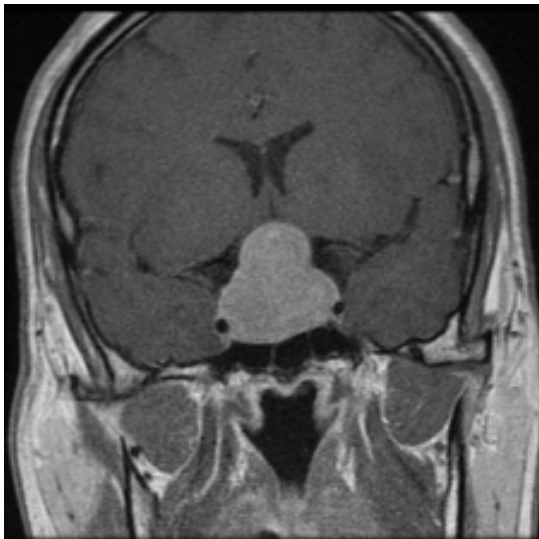

The AI model suggests a high-risk diagnosis of pituitary cancer, with a very high confidence level of 100.0% and a risk score of 99/100, indicating a strong and clear pattern in the medical image consistent with this finding. The full probability distribution shows a clear dominance of the pituitary class, with no significant competition from other classes, such as glioma, meningioma, or non-tumor findings. However, given the high risk level, it is essential to consider differential diagnosis and consult a neuro-oncologist and neurosurgeon for further evaluation and confirmation. The Grad-CAM heatmap highlights a specific region of interest, which should be carefully examined during the clinical assessment. This high-risk finding warrants urgent attention and prompt specialist consultation to determine the best course of action. Please note that this is an AI-assisted screening result and not a definitive diagnosis, and further clinical evaluation is necessary to confirm the diagnosis and develop an appropriate treatment plan.
