

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 23:15:33

Cancer Type: Brain

Report ID: 171E2169

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

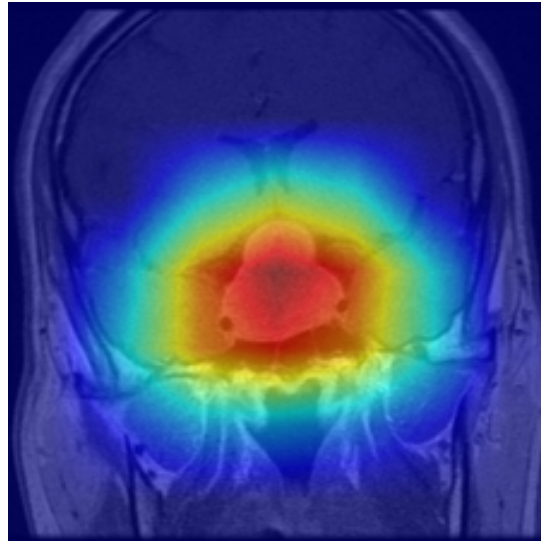

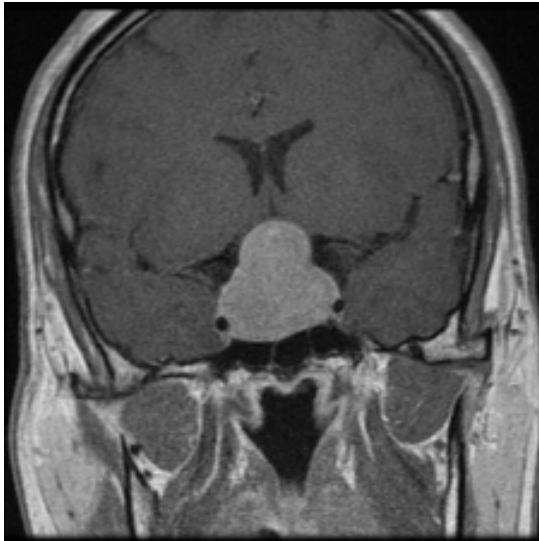

The AI model suggests that the medical image is highly suggestive of a Pituitary tumor, with a very high confidence level of 100.0%, indicating that the image patterns are strongly and clearly consistent with this finding. The risk level is classified as High Risk, with a risk score of 99/100, necessitating urgent evaluation and management. The full probability distribution shows a clear dominance of Pituitary over other potential diagnoses, with negligible probabilities for Glioma, Meningioma, and non-tumor classes, thereby reducing the likelihood of differential diagnosis. Given the high risk level, it is essential to consult a neuro-oncologist and neurosurgeon as soon as possible to confirm the diagnosis and develop an appropriate treatment plan. This AI-assisted screening result should be considered as a preliminary indication, not a definitive diagnosis, and should be further evaluated and confirmed through comprehensive clinical assessment and diagnostic testing.
