

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 22:35:38

Cancer Type: Brain

Report ID: 21709494

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

The AI model suggests a high-risk diagnosis of Pituitary cancer, with a very high confidence level of 100.0%, indicating that the image patterns are strongly and clearly consistent with this finding. The probability distribution shows a clear dominance of Pituitary over other classes, with no significant competition from Glioma, Meningioma, or Non-tumor, suggesting a relatively straightforward diagnosis. However, given the high risk level of 99/100, it is essential to proceed with caution and consult a neuro-oncologist and neurosurgeon as soon as possible to confirm the diagnosis and discuss treatment options. The Grad-CAM heatmap indicates a region of interest that warrants further investigation. It is crucial to note that this is an AI-assisted screening result, and a definitive diagnosis can only be made through a comprehensive clinical evaluation and further diagnostic testing.
