

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-05-08 23:45:09

Cancer Type: Brain

Report ID: 44D53C71

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	95.87%	95 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 95.87%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

- The AI model suggests image features most consistent with Pituitary, with confidence 95.9%, and this should be interpreted together with the full clinical picture.
- Arrange prompt specialist review without delay. Current risk score is 95/100, which should guide how quickly the case is reviewed.
- The uploaded image appears dark, moderate-contrast, and neutral-toned, so interpretation should be correlated with image quality and the original study.
- Grad-CAM shows a focal attention pattern centered in the mid-zone central region, which can help prioritize what to review first. Focus of follow-up: Emphasize visual symptoms, endocrine review, pituitary hormone testing, and timely specialist follow-up if headache, vision change, or hormonal symptoms are present. Consult neuro-oncologist, neurosurgeon, and endocrinologist; this is an AI-assisted screening output and not a confirmed diagnosis.
