

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 21:16:01

Cancer Type: Brain

Report ID: EA1534F9

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

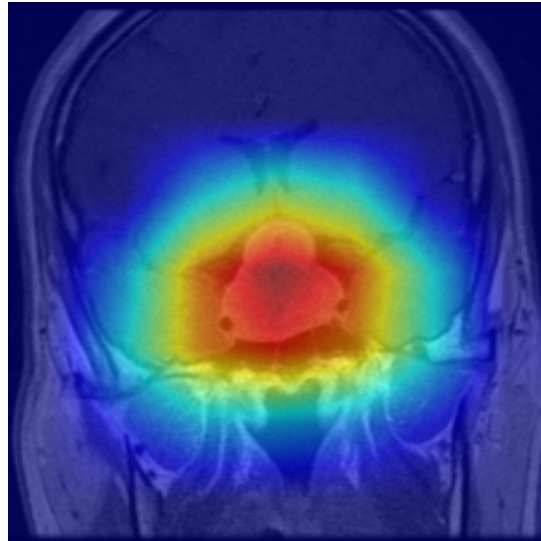

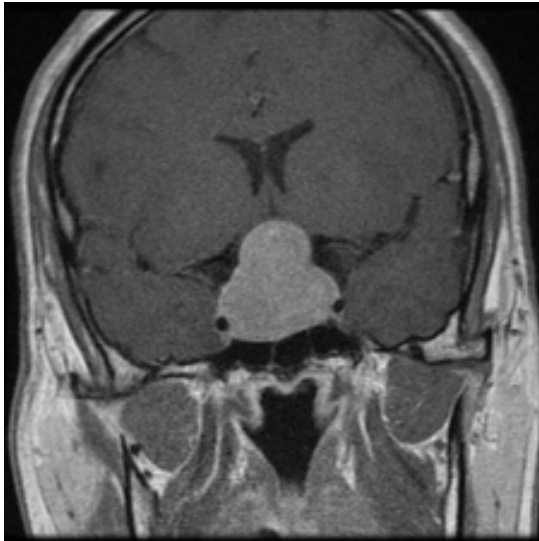

The AI model suggests a high-risk finding of a pituitary tumor based on the very high confidence level of 100.0% and the clear image patterns consistent with this diagnosis. The risk level of 99/100 indicates an urgent situation, warranting immediate consultation with a neuro-oncologist and neurosurgeon to discuss further evaluation and management. The full probability distribution shows a strong dominance of the pituitary class, with essentially no competition from other classes, thereby minimizing the need for differential diagnosis. However, it is essential to note that the Grad-CAM heatmap did not specify a region of interest, which may limit the utility of this analysis. This result should be interpreted as AI-assisted screening, not a definitive diagnosis, and further evaluation by a specialist is necessary to confirm the findings.
