

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 22:45:50

Cancer Type: Brain

Report ID: 07761008

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

The AI model suggests a high-risk finding of a pituitary tumor, with a very high confidence level of 100.0% and a near-perfect match to the predicted class in the full probability distribution, indicating a strong and clear image pattern consistent with this diagnosis. The absence of significant probability in the competing classes of Glioma, Meningioma, and Notumor further supports this finding. Given the high risk level of 99/100, it is essential to proceed with a sense of urgency, and I recommend consulting a neuro-oncologist and neurosurgeon as soon as possible to confirm the diagnosis and discuss treatment options. The Grad-CAM heatmap highlights a specific region of interest, which may aid in further evaluation. It is essential to note that this is an AI-assisted screening result and not a definitive diagnosis, and further clinical evaluation and diagnostic testing are necessary to confirm the presence and nature of the tumor.
