

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 22:34:50

Cancer Type: Brain

Report ID: B73064E5

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Pituitary	100.0%	99 / 100	High Risk

Diagnostic Summary

Potential cancer-like pattern detected consistent with pituitary (confidence 100.0%). Immediate clinical verification is strongly recommended.

AI-Generated Clinical Recommendation

The AI model suggests that the medical image is highly suggestive of a Pituitary tumor, with a very high confidence level of 100.0% and a risk score of 99/100 indicating a High Risk level. The strong pattern consistency in the image supports this finding, with the probability distribution showing a clear dominance of Pituitary over other classes, including Glioma, Meningioma, and Notumor. Given the high risk level and the potential for significant morbidity, it is essential to consult a neuro-oncologist and neurosurgeon as soon as possible to discuss further evaluation and management. The Grad-CAM heatmap highlights a specific region of interest that warrants further investigation. This is an AI-assisted screening result, and a definitive diagnosis should only be made after a thorough clinical evaluation and further diagnostic testing.
