

Multi-Cancer Diagnostic Report

AI-Assisted Screening · ResNet-18 + Grad-CAM

Generated: 2026-04-07 23:45:31

Cancer Type: Skin

Report ID: 4B97DA92

Prediction Summary

Prediction	Confidence	Risk Score	Risk Level
Benign	91.87%	8 / 100	Low Risk

Diagnostic Summary

No malignant pattern detected. Model confidence: 91.87%. Routine monitoring is still recommended.

AI-Generated Clinical Recommendation

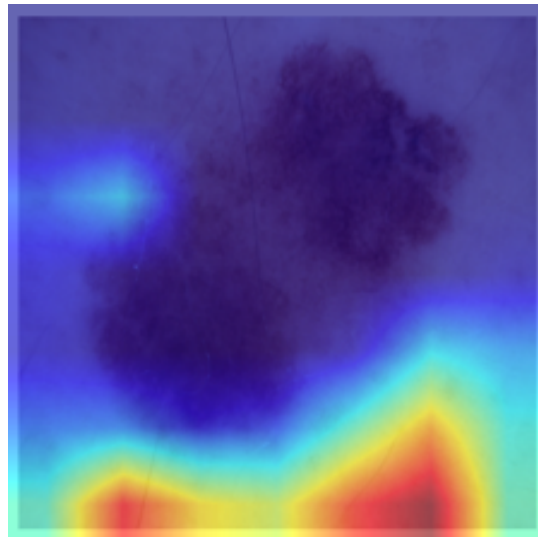

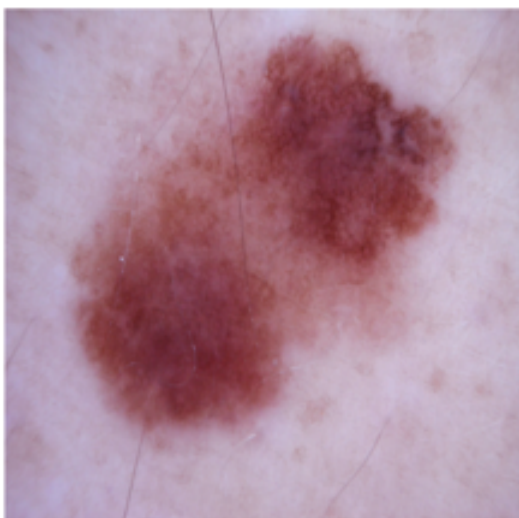

- The AI model suggests image features most consistent with Benign, which should be interpreted together with the full clinical picture.
- Use routine follow-up timing unless symptoms or imaging concerns increase.
- The uploaded image appears balanced, moderate-contrast, and warm-toned, so interpretation should be correlated with image quality and the original study.
- Grad-CAM shows a focal attention pattern centered in the lower central region, which can help prioritize what to review first. Focus of follow-up: Emphasize lesion monitoring, dermoscopic review if clinically suspicious, and watching for asymmetry, border irregularity, color change, bleeding, itching, or rapid growth.
- Consult dermatologist; this is an AI-assisted screening output and not a confirmed diagnosis.
